

What is claimed is:

1. A plug inner frame comprising:

a frame in the form of a block; and

at least two blades securely held by the frame, each of said at least two blades including an enclosed section and an exposed section, each of said at least two blades including an end having a wire-receiving groove, a neck being defined between said wire-receiving groove and said exposed section, said neck of each of said at least two blades being so twisted that said wire-receiving grooves of said at least two blades face the same direction.

2. The plug inner frame as claimed in claim 1, wherein the said exposed section of each of said at least two blades includes a wider front section and a narrower rear section, said narrower rear section including a first face and a second face opposite to said first face, a transverse through-hole being defined in said narrower rear section and extending from said first face through said second face, further comprising a reinforcing guide slot defined in said narrower rear section and communicated with said transverse through-hole, said reinforcing guide slot extending from said first face through said second face of said narrower rear section.
